Handbook for Veterinarians and Beef Producers

Approved for distribution and use by the National Johne's Working Group a subcommittee of the Johne's Committee of the United States Animal Health Association

For explanation and/or instructions on how to complete this document, refer to the instruction handbook entitled, "How to Do Risk Assessments and Management Plans for Johne's Disease"

Acknowledgements

This Handbook is an evolution from previous editions of Veterinary Manuals that were used to complete risk assessments and develop management plans to prevent or control Johne's disease in cattle herds for the Voluntary Bovine Johne's Control Program.

The First Edition was designed and edited by:

C. A. Rossiter Burhans, Poulin Grain Inc., Newport, Vermont

D. Hansen, Oregon State University

L. J. Hutchinson, The Pennsylvania State University

R. H. Whitlock, University of Pennsylvania

The Second Edition was designed and edited by:

C. A. Rossiter Burhans, Poulin Grain Inc., Newport, Vermont

D. Hansen, Oregon State University

R. H. Whitlock, University of Pennsylvania

Previous editions were reviewed and approved for distribution by the National Johne's Working Group (NJWG), a subcommittee of the Johne's Committee of the United States Animal Health Association (USAHA).

This Third Edition was designed, edited and reviewed by members of the USAHA Risk Assessment, Herd Management and Education Standards Task Force for the Voluntary Bovine Johne's Control Program. They were appointed by the Co-Chairs of the NJWG a subcommittee of the Johne's Committee of the United States Animal Health Association.

Don Hansen, CVM, Oregon State University (Chair)

Current Herd Health Status and Concerns (Filling out this page is optional)

Collecting this information will provide important information to consider when drafting Johne's management plan. Listed here are the herd's performance-limiting health issues and/or the level of concern that the owner has for them. Many of the potential health and production problems listed below may already be addressed by the owner. The final Johne's management plan should blend in with these current performance-limiting health issues and concerns.

Fill in requested information, circle choice or specify the incidence (or level of concern for problem) by checking your choice (U, 1, 2 or 3) in the box next to listed disease.

U= unknown incidence or problem

- 2= Moderate incidence, may need attention
- 1= OK, low incidence, not considered problem
- 3= Significant incidence, unsatisfactory, needs attention

Risk Assessment Scores (based on visual observation of each environment and investigation of policy).

Estimate the risk for fecal/oral and colostrum/milk disease spread, or gap in farm's biosecurity, for each management practice. Note how current management conditions differ from past. Ideally, producer & veterinarian score risks independently. Then compare & discuss relative importance in development of management plans. See Step 4 in the 'How to Do' handbook, pages 2 - 3 and 6 - 7 for guidelines to completing area risk assessments.

A. Calving Area Risk Factors (Place an X in the box to the right of the management practice that most closely signifies the risk for that item.)	0.	1. V. Low	2. Low	3.	4.	5 Moderate	.9	7.	8. High	9.	V High
1. Multiple animal use [Single use pen → Very crowded calving area]											
2. Manure build-up risk for calf ingestion [Clean dry → Dirty wet]											
3. Manure soiled udders / legs [Never → Always]											
4. Presence of JD clinicals or suspects here [Never → Always]											

Notes / Current vs. Past

Maximum score is 40. Your herd score is _____. Consider the impact of JD prevalence on ability to reduce risks.

Estimate the risk for spreading Johne's in the calving area: Very Low Low Moderate High Very High (Circle choice)

B. Nursing Calf Risk Factors	0.	1. V. Low	2. Low	3.	4	5. Mod.	.9	7.	8. High	.6	10. V. High
Cow/calf pairs kept with JD clinical or suspect animals [Never → Frequently]											
2. Manure build up risk for calf ingestion [Clean dry → High manure load]											
3. Possible manure contamination of water by cows, traffic splatter, equipment or people. [Never → Frequently]											
 Possible manure contamination of feed by cows, traffic splatter, equipment or people. [Never → Frequently] 											
5. Sick calves exposed to sick cows [Never → Frequently]											

Notes / Current vs. Past

Maximum Score is 50. Your herd score is _____. Consider the impact of JD prevalence on ability to reduce risks.

Estimate the risk for spreading Johne's in pre-weaned calves: Very Low Low Moderate High Very High (Circle choice)

Notes / Current vs. Past

C. Weaned Heifers and Bull Calves Risk Factors	ó	1. V	2.	3.	4. Mod.	5.	.9	7. V
1. Direct contact with cows or their manure [Never → Frequently]								
2. Possible manure contamination of feed: stored feed, equipment, from cows, traffic splatter, people or runoff [Never → Frequently]								
3. Potential for contamination of water: shared with cows, traffic splatter, runoff or people [Never → Frequently]								
4. Share pasture with cows/bulls [Never → Frequently]								
5. Manure spread on forage grazed/harvested same season [As #4. above]								

Maximum Score is 35. Your herd score is _____. Consider the impact of JD prevalence on ability to reduce risks.

Estimate the risk for spreading Johne's in post weaned heifers: Very Low Low Moderate High Very High (Circle choice)

D. Bred Heifer and Yearling Bull Risk Factors	0.	1. V Low	2.	3. Mod	4.	5. V High
1. Direct contact with cows or their manure [Never → Frequently]						
2. Possible manure contamination of feed: stored feed, equipment, cows, traffic splatter, people or runoff [Never → Frequently]						
3. Possible manure contamination of water sources: shared with cows, by cows, traffic splatter, runoff or people [Never → Frequently]						
4. Share pasture with cows/bulls [Never → Frequently]						
5. Manure spread on forage grazed/harvested same season [As #4. above]						

Notes / Current vs. Past

Maximum Score is 25. Your herd score is_____. Consider the impact of JD prevalence on ability to reduce risks.

Estimate the risk for spreading Johne's in bred heifers: Very Low Low Moderate High Very High (Circles choice)

E. Cow and Bull Risk Factors 1. Possible manure contamination of feed: when fed or stored, by equipment, traffic splatter, runoff or people. [Never → Frequently] 2. Possible manure contamination of water: by cows, traffic splatter, runoff, people [Never → Frequently] 3. Direct access to accumulated or stored manure [Never → Frequently] 4. Manure spread on forage grazed or harvested the same season [As #3. above]

Notes / Current vs. Past

Maximum Score is 16. Your herd score is _____. Consider the impact of JD prevalence on ability to reduce risks. Estimate the likely risk for spreading Johne's among cows: High (Circle choice) Low Moderate

F. Sources of Additions and Replacements	Number of Animals								
r. Sources of Additions and Replacements	1-5	6-12	13-20	21 50	>50				
1. Get additions or replacements from Level 2-4 Status Herd	0	2	4	6	8				
2. From low risk herds, Level 1 or pre-tested herds	10	11	12	13	14				
3. From single source non-tested or non-program herds	20	22	24	26	28				
From multiple sources non-tested, non-program herds or markets	30	34	36	38	40				

Total

Notes / Current vs. Past

(Circle the square in each row that reflects management in the past 12 months. Include ET recipients and leased bulls.)

Maximum Score allowed is 60 (If >60 only place 60 points in space). Your herd score is_____. Consider the impact of JD prevalence as above.

Estimate the likely risk from herd additions/replacements: Very High (Circle Choice) Very Low Low Moderate High

Risk Assessment Summary Completing this table	Risk Factor Areas	Maximum Score	Your Herd Score	Each Area Herd Score / Each Area Max Score (%)	Each Area Herd Score / Your Total Herd Score (%)
is optional	Calving area	40			
However, calculating the herd	Pre-weaned calves	50			
score for each area as a percent of the area's maximum score and as	Post-weaned calves	35			
a percent of the herd's total score	Yearling bulls and bred heifers	25			
will highlight the top risk areas to address in the management plan.	Cows and bulls	16			
address in the management plan.	Additions/Replacements	60			

226

,	ortange rachtmed by assessment
Building the elements of the test the 'How to Do" booklet, pages 8, for c	ting strategy for the Johne's management plan. See Step details.
1. What is the testing scheme expec	cted to accomplish; how it will help achieve herd plan objectives?
2. What test (s) will be used?	
3. Who will be tested?	

in

Assembling the Johne's Disease Management Plan

5. What decision (s) will be made on results? Consider higher vs. lower risk 'test-positive' cattle.

See Step 6, pages 8 – 10, in the 'How to Do' handbook. Issues to integrate include:

4. When?

List the risk factors of most importance identified by assessment

- 1. The owner's Johne's management plan objectives (e.g., find out if JD is present, eliminate the infection from herd, prevent introduction into herd, establish official test-negative or low-risk status).
- 2. List planned management changes for each area or management group brought to light by the risk assessment. If there are no changes planned for a specific area or group, simply list current herd management procedures.
- 3. Be certain to coordinate Johne's management procedures in this plan with other health / management objectives already in place. It may serve as an incentive for owners with low risk herds thinking of seeking official status. Especially note where these other objectives and health concerns will benefit from the Johne's management efforts that are outlined in the plan, (e.g., lower calf mortality or morbidity, healthier fresh cows, etc.). See Step 7, pages 10 and 11, in the 'How to Do' handbook for guidelines.
- 4. Before signing off on this management plan, be certain the overall strategy is comprehensive and effective enough to meet management goals. The plan should take current JD prevalence estimate into account for setting realistic goals. Proposed actions should be practical and feasible to implement and they may be applied in phases. Procedures should integrate with available resources and other management priorities. See Step 8, page 12, in the 'How to Do' handbook for guidelines.
